

PAINT SPRAY PUMPS

Ideal

Pump

The capacity of this Pump is from 20,000 to 30,000 sq. ft per day, is strong and simply constructed, easy of adjustment and complete with ten feet of discharge hose, etc., as shown by the cut. All principal parts are of brass, so as not to be affected by rust. We strongly recommend this Pump for painting the largest surfaces and to contractors, in applying our Apex Cold Water Paint. Will also apply lime white-wash. Shipping weight about 100 pounds.

Apex Cold Water Paint

FOR INDOOR USE

THIS Paint is a dry mineral powder—is an excellent disinfectant—and remains white. It can be applied to wood, brick, stone, plaster and old oil painted surfaces, that are dry and will not rub or scale. It makes a smooth, permanent finish, on which it is impossible for fire to spread. Only clean, cold water required to prepare it for use. It has a large covering capacity; made only in white.

We guarantee that our spray pumps will spray this paint. It is in fact the only paint of its class that can be sprayed with success. The pumps reduce the cost of painting large surfaces to a few cents per square—will avoid the necessity of staging for high walls and ceilings and make the most perfect application of the Paint to rough surfaces and places impossible to reach with the brush. Can be brushed on rapidly with wide brushes.

Bell Weatherproof Paint

THIS is a most desirable Cold Water Paint, a dry mineral powder, for use on the outside of all wooden buildings—warehouses, factories, mining plants, barns, fences; also in wet rooms of cheese and butter factories, breweries, bottling houses, laundries, paper mills, etc. It can also be applied successfully with our spray pumps.

ETNA PUMP

This pump being in bucket form, is very convenient to handle. The bucket is made of galvanized iron; holds six gallons.

The pump is of brass, is very durable and will spray 12,000 to 15,000 sq. ft. per day with our paints.

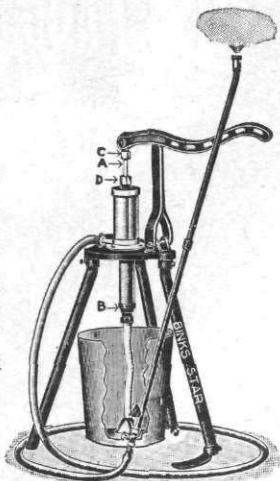

We supply it complete as per cut; has 10 feet of discharge hose.

PRICE \$18.00

MODEL PUMP

This is very strong, durable and efficient. The working parts are brass; the handle and legs of iron, bolted on firmly. It has a suction hose so as to extend into a bucket or tub or the pump may be adjusted to a barrel. We supply it as shown in cut (without pail) with 10 feet of discharge hose and a long spray rod complete; shipping weight 40 lbs.
